

Overview

Convoluted tubing is plastic tubing that has flexible corrugated sections and provides flexibility equal to that of conventional rubber hose.

The combination of flexible sections and straight sections can be configured according to our customers' needs and applications.

Features

1. Can be used as an alternative to rubber hose
2. Lightweight
3. Multi-layer specification conforms to North American evaporative emission regulations
4. Extensive available variations enable us to offer optimal specifications to meet our customers' needs
5. Modularization is possible with quick connectors, joints, and other connecting components

Primary Applications

ORVR (Onboard Refueling Vapor Recovery) system tubing

Vapor tubes

Filler tubes
