

Overview

PVdF coating is the application of a fluorocarbon polymer coating over the surface treatment (Zn plating) of welded steel tubing and brazed steel tubing.

It offers chemical-resistance and rust-prevention capabilities.

Features

1. Environmental performance
 - Chromium-free, including surface treatments
 - Can be supplied worldwide
2. Rust-prevention performance
 - Salt spray testing: cleared 3,000 hours

Primary Applications

Automotive tubular components (brake tubes, fuel tubes)

Other tubular products
